HARSH JHA SPEECH TO TEXT

Hello, I am Harsh Jha. I will be now sharing my experience with the original MyGov website and the website Soumil and his friends have designed for their UI/UX assignment submission. Okay, so I am checking out the original MyGov podcast website. I am a second-year college student, and honestly, I usually listen to stuff while traveling or doing other work. So my task is to find an interesting episode, start listening, and see if I can come back to it later. All right. I am on the home page. There were quite a few episodes here. I will look for something related to youth or startups. I am scrolling. Okay, some titles look interesting, but there is not an obvious way to narrow things down by topic. I have to look through everything myself. Let me click this episode. Oh, okay, I need to open another page to figure out how to play it. That's a bit annoying. I just want to listen, you know? Anyway, let me get the audio started. Now suppose I am traveling and have to stop listening halfway through. I want to come back later and continue from the same point. I am looking for a save option or a listening history. I cannot find anything obvious. Maybe I am missing it, but it's not really clear. I probably have to remember the episode and find it all over again. Honestly, I would not want to do that every time. Okay, that is enough of the original website. Let's try the redesigned one. All right, so I am using the updated website now. I will try finding an episode and coming back to it later. Nice, I can browse by topic. Let me check the youth and startup content. What's easier than scrolling through everything? I will play this episode. Okay, it starts straight away, and the player stays at the bottom while I browse. Pretty useful. Now I will save it and check the library. Yep, it's there, and I can see my listening progress. So if I stop halfway and come back later, I can continue without searching for the episode again. Honestly, it's exactly what I need as a student. I can listen between classes or while traveling and pick up where I left off. The original website made this more confusing than necessary. This version is much simpler. I can find an episode, save it, and return to it without wasting time. Yeah, I will 100% prefer this one. It's practical, easy to use, and does what I expect. Thank you so much.
